

Announcement of NDE After Effects Study and Call for Research Participants

Description of Research Project:

To explore what transpires during an NDE that triggers an onset or enhancement of cognitive or physiologic faculties post-NDE.

Examples of cognitive or physiologic enhancements include new-found musical, artistic or mathematical ability. Physiologic changes might include improved eyesight, spontaneous healing, electrical sensitivity, enhanced IQ.

The goal of the study is to explore changes produced by NDE's that are not explained through physical science.

Candidates:

Candidates must have experienced an NDE or NDE-like experience that was transformative and produced verifiable cognitive or physiological changes.

Enhanced spirituality or psychic ability will not be considered for this study. Only those behaviors that can be objectively verified will be considered.

Process:

Candidates will undergo a psychic reading to assess, on a metaphysical basis, those cognitive or physiologic changes incurred by the NDE. Readings will be arranged to accommodate the candidates schedule and may take place in person or through Skype. The readings will last, on average, one to two hours including a post-reading de-briefing. Additional follow up through email contact may be required. There is no charge for the reading.

About:

Debra Diamond is an intuitive with years of experience in health care analysis and research and a former Professor at Johns Hopkins University. Website: www.debradiamondpsychic.com
